

Creating Custom Symbol Templates

Symbol Templates Overview

 Each diagram that you create can contain symbols, the appearance of which are pre-defined. You can define new sets of symbols that can appear on a new diagram type by supplying an image file and repository properties for each symbol.

Symbol Templates Overview

- Each diagram symbol maintains a repository entry.
- Each new symbol can be defined with a composition and linkage capability
- The custom symbol name type can only be used once on a template. Use a different name for the symbol on another template

Symbol Templates Overview

 The new diagram type is included when a new project is created.

 The template symbols can be edited after they have been created and used on a diagram.

Network – Security Symbol Icons Free symbols can be downloaded from the Web or contact Visible Systems: support@visible.com

• The new symbols are displayed in the diagram tool bar.

• The Diagram Tool bar.

- Left mouse click on a symbol and drag the cursor onto the diagram
- Left mouse to click to add the symbol.
- Label the Symbol.
- Click the Esc key to exit drawing mode.
- Save the diagram (File | Save)
- Double click on the symbol to access its repository entry.

• The new custom symbol diagram

• The repository entry for the new object

Symbol Template Summary

- The on-line Help topic Symbol Templates contains additional information about this feature.
- The tutorial file "tutor.pdf" can be accessed from the Help menu, and explains the function and use of the Visible Analyst. It works in conjunction with the TEST project.
- Our FREE "How To" videos can be accessed using this link:

http://www.visible.com/Videos/how_to_videos/how_to_videos.htm

• These "How To..." videos were created to help users understand how the application works and to demonstrate the use of the Visible Analyst.
