### **News Release: Visible® rolls out Agile Development.**

**BOSTON, MA - March 31, 2013** – Visible rolls out agile development, adding to its support for traditional, hybrid and object-oriented analysis and design practices. Incorporating SCRUM into the integration of its systems analysis and design product, Visible Analyst and an issues based, task management system, Polaris; you will be able to better manage both the demand for change and the resources to accommodate those changes within the Agile Framework. Included in the release is also a client integration to Subversion (SVN) - one of the more popular version control open source software programs on the market today.

"Most agile development projects break tasks into small increments with short time frames that typically last from one to four weeks. With the integration of Visible Analyst and Polaris, each iteration of the project is automated from the requirements, analysis, and design through coding, testing and acceptance. At the end of the iteration a working product can be demonstrated to its stakeholders. With the new release of Polaris and its integration, you are better able to better measure progress in your development projects. This minimizes overall risk and allows the project to adapt to changes quickly." said Michael Cesino, President and CEO.

#### **BENEFITS:**

- Manage multiple Scrum development and team members.
- Schedule/facilitate Sprint planning meeting(s) prior to the beginning of each Sprint.
- Communicate committed stories for the upcoming Sprint to the backlog owner and stakeholders.
- Support the Backlog Owner and Product Manager in updating monthly the 30-60-90 release.
- Schedule and facilitate daily stand up meetings.
